

AITOR IZURRATEGUI

PRODUCT ENGINEER | UNITY | AI FIRST DEVELOPER

Product engineer with 5+ years building Unity/VR experiences, currently owning cross-cutting systems on a Meta-funded Mixed Reality sports app for Meta Quest. AI-first developer leveraging agentic tools (Claude Code) to move fast across game, web and tooling projects, with strong UX and systems design instincts.

PROFESSIONAL EXPERIENCE

YBVR (YERBA BUENA VR) • Madrid, Spain

Nov 2024 - Present (1 year 9 months)

Unity VR Developer

- Developed Unity/OpenXR features for Xtadium, a free Meta-funded Mixed Reality sports app for Meta Quest featured as a top Meta MR app, streaming NBA, UFC, EuroLeague and NASCAR content up to 8K 180°/360°.
- Redesigned the app's spatial UI system for VR and Mixed Reality: default placement and scale of every panel, plus automatic repositioning tied to the headset's native recenter, replacing a manual confirmation step.
- Built a UI component system and a shared design-system package (custom UI Toolkit editors, global data bindings) that let the design team assemble and restyle screens directly in Unity, fully removing engineering from UI layout work.
- Owned the first-run interactive tutorial end to end, from Timeline prototype to production: step sequencing with exit and resume at any point, 3D coachmarks in space, immersive video synced to the flow, and hand-tracking support.
- Built a real-time interactive 3D tabletop for NASCAR content: a manipulable track model rendering 100+ cars from chunked race telemetry, kept in sync with video playback and designed to consume the same stream for live and VOD.
- Built co-watching (watch party) in remote and co-located modes on Photon, with split host/guest permissions, guest playback controls and reactions, and host handover.
- Built the reusable spin-off system powering 5+ derivative apps (Xtadium Music, CultVRe, EuroLeague TV VR, X Games 360Vision) from a shared codebase, plus the localization system behind it (English, Spanish and German, extensible to any number of languages).
- Migrated the interaction rig to Unity's XR Interaction Toolkit and the headset loader from Oculus to OpenXR, restoring every dependent interaction (reticle, grab, panel and object manipulation) and the app's 3D minigames on the new rig.
- Optimized rendering and data pipelines to sustain a stable 90 FPS on Meta Quest, including smart loading of the interface, generic object pooling and Addressables organized per build configuration.
- Owned the notification subsystem across two generations and the retirement of the legacy one, within a continuous refactor of core systems (navigation, backend data integration, Built-in to URP migration) that cut technical debt on a live app without slowing delivery.

LURTIS AI • Móstoles, Spain

Sept 2022 - June 2024 (1 year 10 months)

Unity Game Developer

- Programmed, tested and optimized gameplay mechanics and in-game environments for an unannounced RPG mobile transmedia title in Unity URP, and helped design and document its mechanics, UI and overall game experience.
- Defined and helped design its inventory system, and prototyped the core gameplay loop: party management and adventure runs across procedural scenarios.
- Coordinated 3D and 2D art teams using an agile workflow to create and implement assets in-engine, following design documentation.
- Developed a management dashboard (Angular, TypeScript, Firebase) and an early multiplayer testing mode for "ZPLN", a released mobile game.

LURTIS AI • Móstoles, Spain

Mar 2021 - June 2021 (4 months)

Intern Unity Developer

- Implemented game mechanics and UI for a serious game focused on teaching recent history to teenagers in a classroom setting.

Intern Unity Developer

- Assisted in the development of a truck inspection simulator for a US commercial driving licence training company, and of a runner-type video game for a Spanish company.

ADDITIONAL EXPERIENCE	
Freelance online	2022
Private tutor in Unity and Programming	
GENETSIS • Madrid, Spain	2017
Intern Networking Technician	
MULESOL, AENA • Madrid, Spain	2016
Intern IT Technician	
PROJECTS	
C++ Game Engine • 3D and 2D	2023
Programmer	
• Developed a c++ game engine using SDL2 and OpenGL for learning purposes.	
Game Jams (Unity). • 3 Solo Game Jams	2024
Designer & Programmer (2-person team)	
• Designed and programmed three solo-jam games in 3-day to 2-week timeframes: Point of No Return (2nd overall, Unity Jam/Tooling.gg), The Precise Hero (4th in gameplay, Todo Game Jam) and Feather Fallout (1 bit Jam #4).	
GIRO (Unity). • Procedural Top-down Arcade Game	2022
Designer & Programmer (4-person team)	
• Designed and programmed overall game experience, mechanics, progression and UI.	
• Awarded the “Most Enjoyable Game” audience award in the Fun&Serious Bilbao Event (2022). Also got nominated for the “Best Retro Game” award.	
EDUCATION	
Universidad Rey Juan Carlos • Móstoles, Spain	2022
Master's in Computer Graphics, Simulation & VR	
UDIT • Madrid, Spain	2018 - 2022
Bachelor Degree in Videogame Development and Game Design	
UDIT • Madrid, Spain	2018 - 2020
Certificate of Higher Education in 3D Animations, Game Development and Interactive Environments	
UDIT • Madrid, Spain	2018 - 2020
Higher National Diploma (UK) in Creative Media Production	
JOYFE • Madrid, Spain	2016 - 2018
Vocational Education and Training in Microcomputer Systems and Networking	
ADDITIONAL EDUCATION	
JOYFE • Madrid, Spain	2022
Cisco CCNA: Routing and Switching · Microsoft Office Specialist
